# What Are Cookies?

- **Cookies** are small pieces of text saved by a **website** on your **computer ,** They help websites **remember** you and your previous activity.

- Example:
  - You searched flights to Paris
  - Closed the page
  - Returned after days → results still there!
  - That’s a cookie remembering your data.

# Purpose of Cookies

| Function | Description | Example |
|---|---|---|
| Identify User | Recognize returning visitors | You open a website → it greets you by name |
| Save Activity | Keep records of actions on the site | Items remain in your shopping cart |
| Personalize Experience | Load your preferences & settings | Website shows your preferred language or theme |
| Track Analytics | Measure visits, clicks, or time spent | Used by marketing and analytics tools |

# Types of Cookies

| Function | Description | Example |
|---|---|---|
| Session Cookies | Temporary cookies that delete when you close the browser | Keeps shopping cart active on an e-commerce site |
| Persistent Cookies | Stored on your device even after closing the browser | “Remember me” login on a website |
| Third-Party Cookies | Installed by external advertisers or tracking services | Ads follow you across websites |

# How Cookies Work

1. You visit a website.
2. The website's **server** sends a **cookie file** to your browser.
3. The cookie is saved on your device's **storage**.
4. Next time you visit → your browser sends that cookie back to the website.
5. The website recognizes you and loads your saved preferences.

**Example:**
When you revisit IMDb → it remembers your last searches or watchlist.

# Viewing Cookies on a Website

**Steps (using Chrome):**

1. Or go to **Settings → Privacy & Security → Site Settings → Cookies and Site Data**.
2. Choose “See all cookies and site data” to view or delete them.

# Managing & Clearing Cookies

- Why clear cookies?
  - Refresh your browsing data
  - Reset website pricing or recommendations
  - Improve privacy
- But be careful!
  - You'll be logged out of sites
  - Some preferences (like dark mode) will reset

🧹 **Clearing cookies** = starting a new connection with websites.

# Question:

Why do you think some websites ask you to “Accept Cookies”? What could happen if you reject them?

# Answer:

**Websites ask you to “Accept Cookies” because:**

•It’s part of **privacy laws** (like GDPR) — websites must get your **permission** before storing any data on your device.

•Cookies help the website **remember your preferences**, **login details**, and **personalized content** (like language, shopping cart, or recommendations).

•They also allow the site to **analyze user activity** to improve services and show **relevant ads**.

# If you reject cookies:

•The website may **not work properly** — for example, you might need to log in every time or lose your saved items.

•Some **features** (like shopping carts, saved preferences, or recommendations) may be **disabled**.

•You will still see ads, but they will be **less relevant** because the site cannot track your interests.
