MANAGING INFORMATION TECHNOLOGY

Navigating Acceptable Use, Policies, and Infrastructure Management

PRESENTER

Mariam Sameh

UNIVERSITY

The British Applied College

British Applied College
الكلية البريطانية التطبيقية

TODAY’S ROADMAP

- Introduction to Acceptable Use Policies
- Roles and Implications of AUP
- Managing IT Infrastructure & Data
- User and Customer Management
- Asset and Incident Management
- Performance Metrics & KPIs

British Applied College
الكلية البريطانية التطبيقية

WHAT YOU WILL MASTER TODAY

- Define and explain the role of Acceptable Use Policies (AUP).
- Identify the key components of IT infrastructure management.
- Understand the implications of policy non-compliance.
- Analyze real-world scenarios for incident and asset management.

British Applied College
الكلية البريطانية التطبيقية

SECTION 01

Acceptable Use Policies (AUP)

What is an AUP?

A comprehensive set of guidelines and rules that define acceptable behavior for users of an organization's IT systems and networks.

Core Purpose

To establish clear expectations for responsible technology use while protecting the organization from legal liability and security risks.

British Applied College
الكلية البريطانية التطبيقية

INTERACTIVE ACTIVITY: THINK-PAIR-SHARE

Think of one action you do daily on a university computer. Is it "Acceptable" or "Unacceptable" according to a typical AUP?

1. THINK
Take 1 minute to reflect individually.

2. PAIR
Discuss your thoughts with your neighbor.

3. SHARE
We will hear a few examples from the class.

British Applied College
الكلية البريطانية التطبيقية

WHY DO ORGANISATIONS NEED AN AUP?

DEFINE USE

Establishes clear expectations for IT resource usage and outlines consequences for violations.

PROMOTE SECURITY

Provides guidelines for protecting assets, such as password safety and avoiding suspicious links.

REDUCE LIABILITY

Protects the organization from legal action related to data breaches or inappropriate user behavior.

FOSTER CULTURE

Encourages a professional environment built on responsibility, accountability, and mutual respect.

THE REAL-WORLD IMPACT OF POLICY

NON-COMPLIANCE

Disciplinary action or termination—acts as a critical deterrent for system misuse.

PRODUCTIVITY

Significantly reduces downtime caused by user errors, unauthorized software, or malware.

REPUTATION

Demonstrates a commitment to ethical behavior and data stewardship to all stakeholders.

COMPLIANCE

Ensures alignment with global regulatory requirements like GDPR and local data privacy laws.

SECTION 02

MANAGING THE DIGITAL BACKBONE

User Management

Policies for access control, authentication, security awareness training, and incident reporting.

Customer Management

Procedures for support channels, FAQs, incident resolution flows, and communication strategies.

CASE STUDY

The Danger of Unauthorized Software

THE SCENARIO

An employee installs a free "productivity tool" from an unverified source. Unknown to them, the software contains a hidden keylogger that begins capturing sensitive corporate credentials.

- **Which specific AUP rule was violated here?**
- **What are the potential legal and security implications?**
- **How could better User Management have prevented this?**

PROTECTING AND RECOVERING ASSETS

ASSET MANAGEMENT

Comprehensive lifecycle management of IT resources to ensure availability and security.

- Hardware and software inventory tracking
- Proactive maintenance and update schedules
- Remote and local software deployment

INCIDENT MANAGEMENT

Structured response protocols to minimize impact and restore services after a disruption.

- Robust backup and disaster recovery procedures
- Crisis communication and authority reporting
- Business continuity and resilience planning

SCENARIO: THE SERVER CRASH

THE PROBLEM

The main student record server crashes during finals week, halting all administrative access.

GROUP CHALLENGE

List the first 3 steps you would take based on "Incident Management" policies.

TIME LIMIT

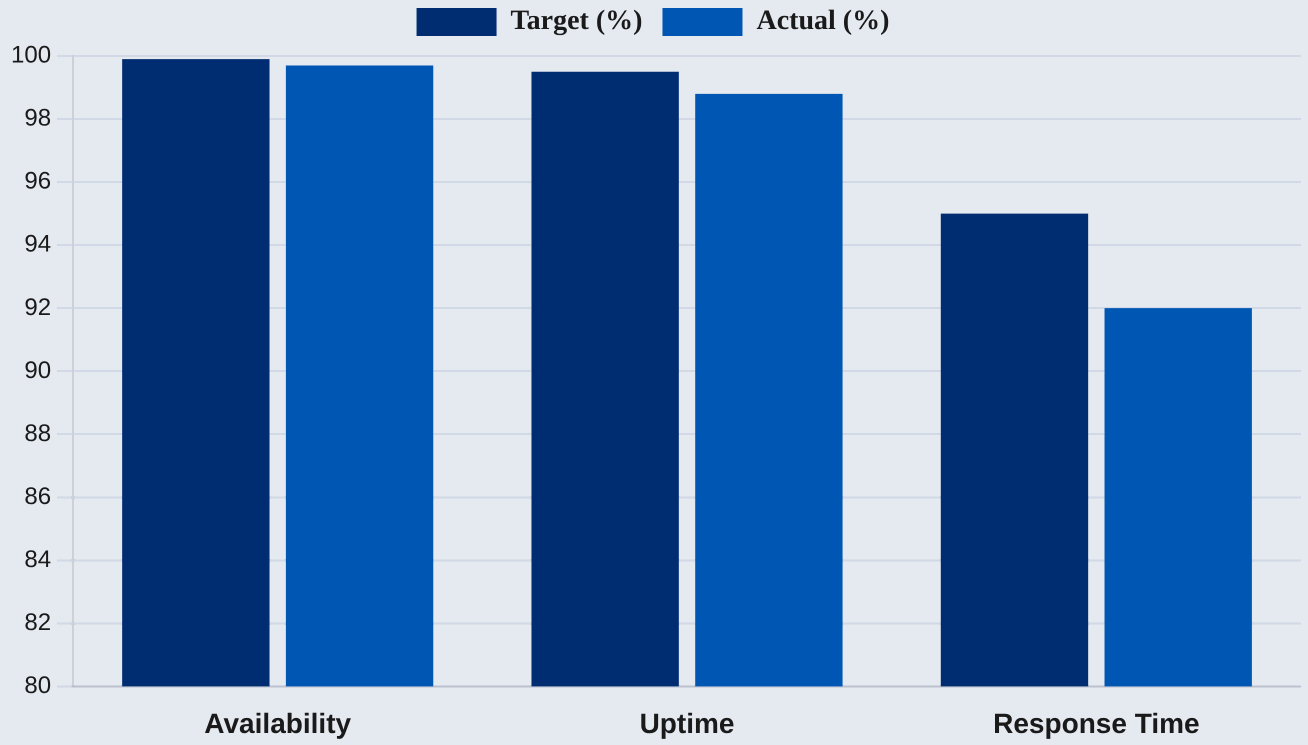
You have 3 minutes to discuss and finalize your response.

MEASURING SUCCESS: PERFORMANCE METRICS

AVAILABILITY
Is the system ready when needed?

UPTIME
Percentage of operational time.

RESPONSE TIME
Speed of system and support.



KNOWLEDGE CHECK: MULTIPLE CHOICE

1 **What is the primary role of an AUP?**

A) To provide free software for personal use.

B) To define acceptable behavior and reduce liability.

C) To monitor personal social media accounts.

2 **Which metric measures how long a system is operational?**

A) Response Time

B) Uptime

C) Throughput

REFLECTION

The Human Element

> ***"Policies are only as good as the people who follow them."***

DISCUSSION QUESTION

How can an organization encourage a 'culture of security' rather than just 'enforcing rules'?

KEY TAKEAWAYS

AUP IS ESSENTIAL

It serves as the foundational contract that protects the organization and guides user behavior.

MANAGEMENT IS HOLISTIC

Effective IT governance integrates user management, customer support, asset tracking, and incident response.

METRICS MATTER

Continuous monitoring of uptime and response times is critical for driving operational improvement.

CULTURE IS KEY

Fostering a culture of responsibility and accountability is more effective than simple rule enforcement.
